- English

Summary

Dynamic **AI Developer with 1 year of hands-on experience in python**, specializing in AI integration, Retrieval-Augmented Generation (RAG). Successfully designed and implemented innovative AI systems and automated testing frameworks that significantly enhanced operational efficiency and software reliability. Proficient in the full development lifecycle, Git version control, and collaborative engineering practices that enable rapid, high-impact software releases. Committed to continuous learning and cross-functional teamwork, delivering adaptable, high-performance solutions that drive user engagement and business value.

Skills

- Python Programming
- LangChain
- Prompt Engineering
- AI Agent
- AI Integration
- Retrieval-Augmented Generation (RAG)
- Model Context Protocol (MCP)
- LangGraph
- Docker
- Git and Github
- NLP

Roles & Responsibilities

- Documented AI architectures, prompting strategies, and experimentation results for knowledge sharing and reproducibility.
- Collaborated with cross-functional teams to define AI requirements, iterate on features, and ensure successful delivery of AI-driven product capabilities.
- Continuously experimented with state-of-the-art prompting techniques, model fine-tuning, and cost-optimization strategies to improve response quality and reduce inference costs.
- Designed and maintained robust evaluation frameworks for LLM outputs (relevance, factual accuracy, tone, safety) and RAG pipeline performance.
- Applied advanced prompting techniques, chain-of-thought, few-shot learning, and iterative refinement to maximize model performance and minimize hallucinations.

Education

- 2021 - 2024 Bachelor of Engineering: Electronics And Communication Engineering
Kongu Engineering College – Erode.
CGPA – 7.05
- 2018 - 2021 Diploma in Electrical Electronics Engineering
VSVN Polytechnic College - Virudhunagar.
Percentage – 87%
- 2017 - 2018 KVS English Medium School - Virudhunagar.
SSLC Percentage – 75%

Professional Experience

DEC 2024 – Present Supernal Info Tech - Hyderabad, India

Project Experience

Marketing Copilot

- Developed an AI chatbot to guide users through product discovery and recommendations.
- Implemented a virtual try-on system using apparel try-on models to enhance product visualization.
- Integrated LLM-powered interactions to improve user engagement and personalization.

Email Automation

- Built an automation pipeline that generates personalized emails from CSV user data using LLMs.
- Implemented end-to-end workflow including content generation, validation, and automated sending.
- Improved outreach efficiency by reducing manual effort and ensuring consistent messaging.

AI Ninjas

- Developed intelligent AI agents to automate proposal writing and task workflows for freelancers.
- Designed prompts, logic flows, and automation modules to improve user productivity.
- Collaborated with product teams to integrate AI features into the platform.

Prompted

- Worked on an AI-powered networking platform similar to LinkedIn with resume-JD matching.
- Built and optimized AI agents that match candidates to jobs using LLM-based similarity models.
- Integrated end-to-end workflows for profile enhancement, recommendations, and automation.

Social Story

- Developed an AI-based storytelling system for autistic children using LLMs to generate topic based stories.
- Created scene-by-scene images using image-generation models and added voice-over using TTS.
- Streamlined the content pipeline to help parents/guardians generate personalized learning stories.
